

Integrate KantanMT into your localization workflow with KantanAPI™

Integrating Machine Translation into the heart of your localization workflow is a proven and an efficient way of achieving higher levels of translation productivity. KantanMT is the world's number one provider of Custom Machine Translation (CMT) services. The scalable and secure platform helps you build high performance MT engines that can be easily integrated into any multilingual content workflow via the KantanAPI™.

Our Connected Partners

Solving Translation Problems with KantanAPI™

The KantanAPI Connector™ is a brilliant feature developed by the KantanMT, which allows users to seamlessly integrate Customised Statistical Machine Translation into their content management systems and/or workflows. The API enables users to generate automatic translation of text segments or documents in real time, within almost any application.

KantanAPI Connectors & Functions

KantanAPI makes the translation process simpler and incredibly fast by easily integrating with leading TMS and CMS tools including: SDL Trados, MemoQ, Memsource and XTM Cloud.

KantanAPI functions include:

- ✓ **QUERY** helps users retrieve information about their account
- ✓ **UPLOADTD** to upload training data to selected client profiles
- ✓ **XLATE** will help retrieve translations from their API instance
- ✓ **GETRESULTS** will help download translation files from previous jobs

Why KantanMT.com?

KantanMT is the Number 1 real time Customised Machine Translation provider in the world.

The cloud based platform is scalable, secure, and simple to operate, ensuring our clients build high quality, custom MT engines at speed that speak their unique language. Contact us now for a FREE personalised platform demo, email: demo@kantanmt.com.
